Answer: D

QUESTION 3

What is the result of adding the line below to the default slapd.conf file?
disallow bind_anon

- A. All users must authenticate to connect to servers.
- B. Clients will be required to provide authentication to use LDAP.
- C. Nothing changes because that is the default setting for Open Directory.
- D. Anonymous BIND (Berkeley Internet Name Daemon) will no longer be used for this server.

Answer: B

QUESTION 4

You have first enabled Personal File Sharing on your computer, and then turned on the built-in firewall. How does the default behavior of the Mac OS X firewall affect file sharing on your computer?

2L0-612

- A. No computer can connect to your computer via AFP.
- B. Any computer can connect to your computer via AFP.
- C. Only computers on the local subnet can connect to your computer via AFP.
- D. Only computers with a local Bonjour address can connect to your computer via AFP.

Answer: B

QUESTION 5

Which command will force users on local computers to create passwords of at least 12 characters, whether or not they are connected to a directory server?

- A. `pwpolicy -l /NetInfo/DefaultLocalNode -a root -setpassword minChars=12`
- B. `passwd -l /NetInfo/DefaultLocalNode -a root -setglobalpolicy minChars=12`
- C. `passwd -n /NetInfo/DefaultLocalNode -a administrator -setpassword minChars=12`
- D. `pwpolicy -n /NetInfo/DefaultLocalNode -a administrator -setglobalpolicy minChars=12`

Answer: D

QUESTION 6

Which file do you configure to enable Common Criteria auditing on startup?

- A. `/etc/audit`
- B. `/etc/hostconfig`
- C. `/etc/security/cc_audit`
- D. `/etc/security/audit_warn`

Answer: B

QUESTION 7

When using certificates, what role does a Certificate Authority (CA) play?

- A. A CA must be present on the server before SSL can be enabled.
- B. A CA is a trusted third party that ensures the identity of the server.
- C. A CA determines what ciphers are available for symmetric encryption.
- D. SSL routes traffic through the CA to verify the identity of the client and server.

Answer: B

QUESTION 8

Which statement best describes Wired Equivalent Privacy (WEP)?

- A. WEP is a moderately secure firewall for wireless devices.
- B. WEP optimizes performance of 802.11 devices over distances, so they perform as well as their wired equivalents.

- C. WEP represents the first attempt at designing an algorithm to protect wireless communication from eavesdropping.
- D. WEP allows wireless access point administrators to require user names and passwords of users who want to connect to the wireless access point.

Answer: C

QUESTION 9
